PROFESSIONAL SUMMARY

Senior Full-Stack Developer & Team Lead with **8+ years** of hands-on experience building production-grade microservices and web applications for fintech and insurance clients including SBI General Insurance, Citibank, and Noor Bank. Specialise in Node.js, React.js, and AWS-based architectures — with a track record of cutting API response times by 30–40% and leading cross-functional teams through full delivery cycles. Comfortable owning both the technical and people side of a project, from architecture decisions to mentoring junior developers and coordinating with product stakeholders.

TECHNICAL SKILLS

- **Programming Languages**: JavaScript, Node.js, Python
- **Frontend**: React.js, Angular
- **Backend**: Express.js, REST API, Microservices
- **Databases**: MySQL, PostgreSQL, NoSQL (MongoDB, Redis)
- **DevOps & Cloud**: AWS (EC2, S3, Lambda), Heroku, Docker, CI/CD Pipelines
- **Tools & Frameworks**: JIRA, Agile, RabbitMQ, CloudAMQP,TypeScript, System Design
- **Third-Party Integrations**: SMTP, SMS OTP, Payment Gateways
- **Soft Skills**: Team Leadership, Cross-functional Collaboration, Agile Methodology

---

PROFESSIONAL EXPERIENCE

Neosoft Technologies, Mumbai | Sep 2021 – Present

Senior Software Developer | Team Lead

- Led the development and maintenance of multiple microservices-based applications for **SBI General Insurance (YUVA)** and **My-Freight (Freightwalla)**.

Frontend:

- Built and owned the React.js frontend for SBI General Insurance's YUVA platform, shipping cross-platform support (Web, Android, iOS) with reusable component libraries using Hooks and Context API — reducing UI-related bug reports significantly post-launch.
- Cut initial load time by introducing code-splitting via React.lazy and Suspense, along with memoization — measurably improving performance on low-bandwidth mobile connections.
- Eliminated a recurring class of API failure bugs by building Axios interceptors handling token refresh and automatic retry logic across the application.

- Collaborated with backend teams to design REST APIs with optimal payloads, reducing over-fetching and improving response times.

Backend (Microservices and APIs):

- Designed and developed **scalable services** using **Node.js**, **Express.js**, and **Sequelize ORM**, integrating with **PostgreSQL/MySQL** databases.
- Implemented **asynchronous APIs** and optimized query execution to handle large-scale concurrent requests.
- Designed and developed RESTful APIs consumed by both internal services and external partners, bringing average response time down by 30–40% through query indexing and Redis caching.
- Integrated **RabbitMQ via CloudAMQP** for async inter-service messaging, decoupling critical workflows and improving fault tolerance across the platform.
- Integrated **SMTP and SMS OTP services**, improving system security and user authentication workflows.
- Conducted code reviews and mentored junior developers, ensuring best development practices.
- Managed **AWS-based deployments**, ensuring high availability and scalability of backend services.
- **Containerised the full Node.js + React.js stack using Docker** and Docker Compose, standardising dev, staging, and production environments and cutting environment-related deployment failures.
- **Automated weekly data export and report generation using Python scripts**, saving the ops team approximately 2–3 hours of manual work per week.
- Conducted regular code reviews and paired with junior developers on complex tasks — two of whom were promoted to mid-level roles during my tenure.

Vernost Marketing Services Pvt. Ltd., Mumbai | May 2017 – Sep 2021

Software Engineer

- **Delivered RESTful APIs for loyalty platforms across Jet Privilege, Citibank, and Noor Bank — handling high-transaction workloads with JWT-based auth and role-level access controls.**
- Improved overall system performance by 25% through database query optimisation and schema redesign across MySQL and MongoDB for e-commerce and rewards applications.
- Refactored a monolithic codebase into modular microservices, which made new feature deployments less risky and the system easier to scale.
- Integrated payment gateways, **SMTP, and SMS OTP** services for enterprise loyalty apps — handled end-to-end from API contract to go-live testing.
- Collaborated with cross-functional teams to bridge backend (Node.js, APIs) and frontend (Angular/React) components, ensuring seamless data exchange and UI responsiveness.
- Followed **sprint-based Agile delivery using JIRA** — consistently hit release deadlines across multi-client projects running in parallel.

EDUCATION & CERTIFICATIONS

Bachelor of Computer Application (BCA)
SNDT University, Matunga, Mumbai | **June 2016**

Certifications:

- **Java Programming** – Aptech Institute
- **ReactJS & AWS Training — Udemy, 2023**

ADDITIONAL INFORMATION

- **Languages**: English, Hindi, Marathi
- **Hobbies & Interests**: Exploring Emerging Technologies, Reading Non-Fiction, Adventure Sports
